Alexandr Khrustalev · Selected work

Websites and data tools for small businesses.

I build websites, turn messy CSV exports into reports you can check, and connect the small pieces between systems. Each project in this overview links to a working demo or a file you can download.

ALLEX RESPECT ASIA is a live business site. The other projects are my own work with fictional companies and sample data, not client work.

Websites 1 of 2

One live business site, plus demos that show store, planning, course and mobile work.

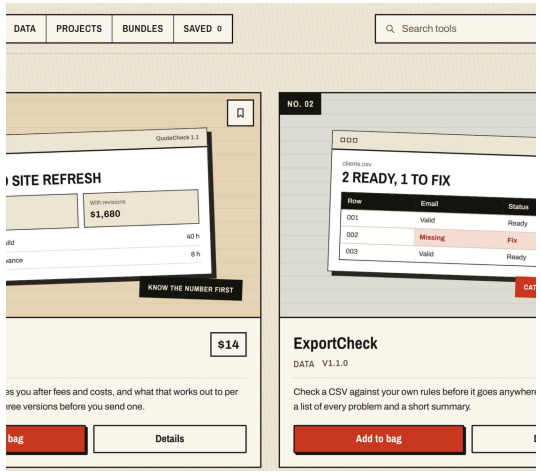

Live business website

ALLEX RESPECT ASIA

I built the company's live site: an animated product collection, four product pages, a comparison table, company information, a document library and mobile navigation. I did the frontend, responsive layouts and deployment. Product artwork and records come from the business.

Open the live site →

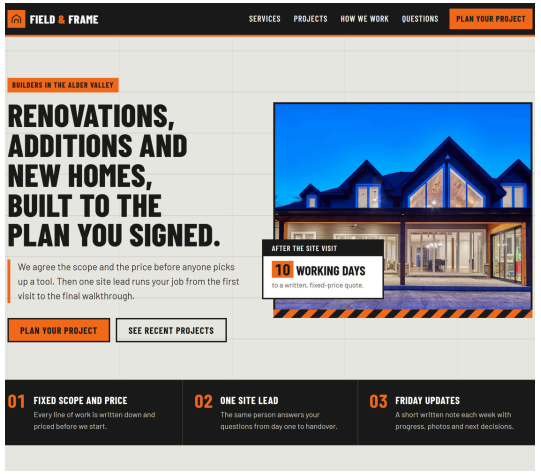

Storefront demo

Toolroom store and seller workspace

A small digital-goods store with search, saved items, a bag and a demo checkout. Buyers get a library with downloads and receipts they can back up. The seller workspace manages the same catalogue. No real payments.

Try the store →

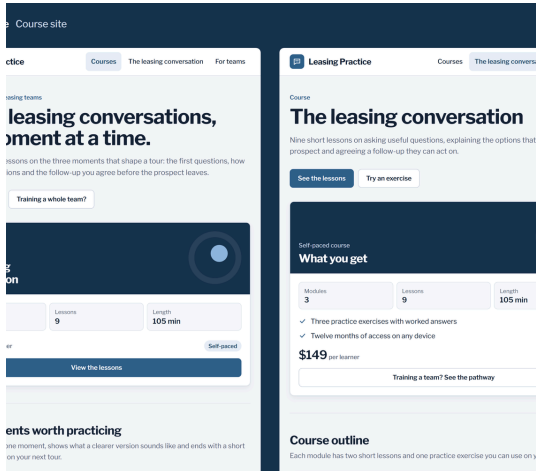

Website concept

Field & Frame builder site

A local builder site with services, project sheets, a four-step process and a brief planner that stays on the visitor's device. The company is fictional.

Open the site →

Course website and emails

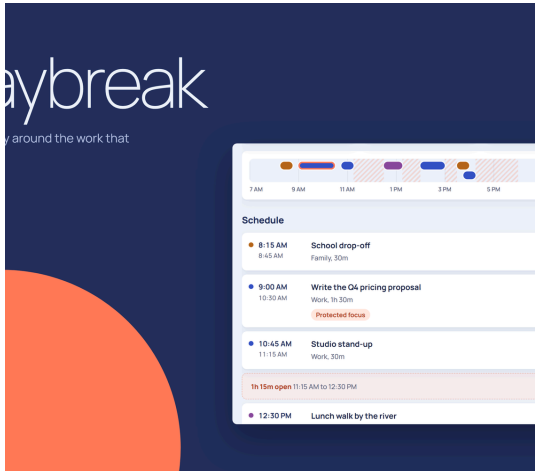

Leasing Practice courses

A course site for leasing teams with a practice exercise that works in the page, a course page, a team bundle, three launch emails and handoff notes. A speculative sample for a public brief.

Open the course site →

Websites 2 of 2

One live business site, plus demos that show store, planning, course and mobile work.

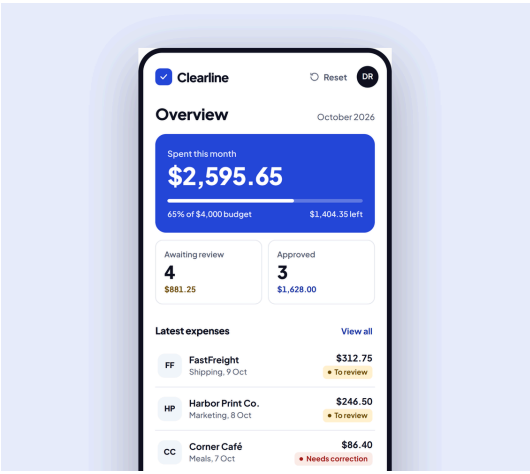

Web app

Daybreak week planner

Day and week views with three calendars, overlap checks, a focus timer that finds open time and a backup you can restore. It works without a calendar account.

Open the planner →

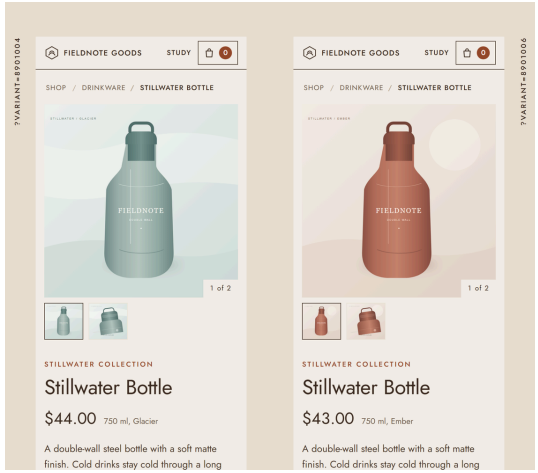

Mobile interface

Clearline expense review

A phone-first screen where a small team scans the month, filters what needs a decision and approves an expense or asks for a correction. The budget is worked out from the sample expenses.

Open the interface →

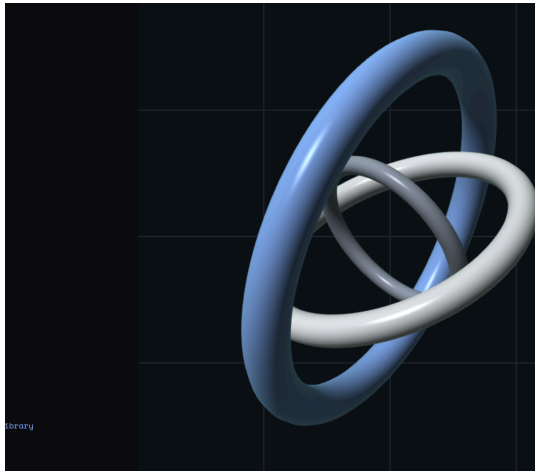

Frontend bug study

Product page that stays in sync

Color, size, price, stock, photo and link always match the choice. Switch on the two common bugs to see them, then compare the fixed page and try it with a keyboard.

Try the product page →

3D and interaction

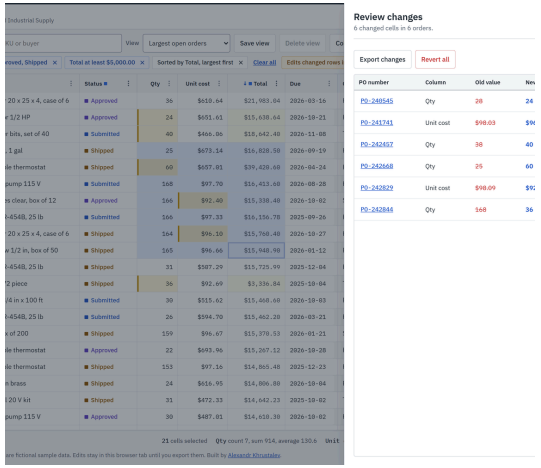

Orbit and other interaction studies

A WebGL scene written without a 3D library that you can drag, turn with the keyboard or swap for a still image. Also a layered graphic that separates as you scroll, and a small responsive page.

Open Orbit →

CSV reports and spreadsheets 1 of 2

Tools that read real exports, say which rows were rejected and why, and give totals you can check by hand.

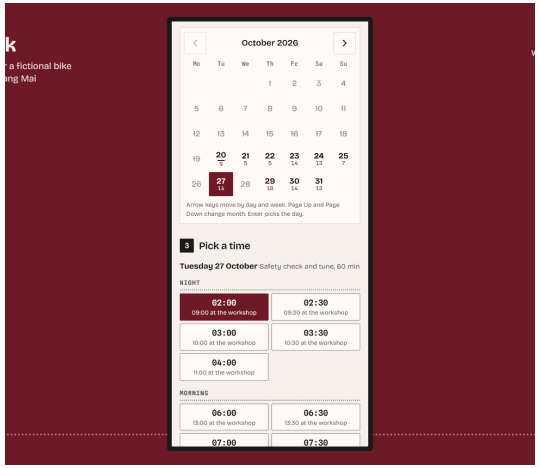

Working web app

Gridline order grid

Edit 20,000 purchase orders in the browser. Filter and sort, paste whole blocks, undo anything and review every change before you export it. Scrolls at 60 fps with 54 unit tests and 128 browser checks. The orders are fictional sample data.

Open Gridline →

Working web app

Slotbook booking page

A booking page for a fictional bike workshop with weekly hours, closed days, buffers between bookings and a calendar you can use from the keyboard. Times show in the visitor's own time zone, stay correct across clock changes, and each booking downloads as a calendar file. 34 unit tests and 97 browser checks.

Open Slotbook →

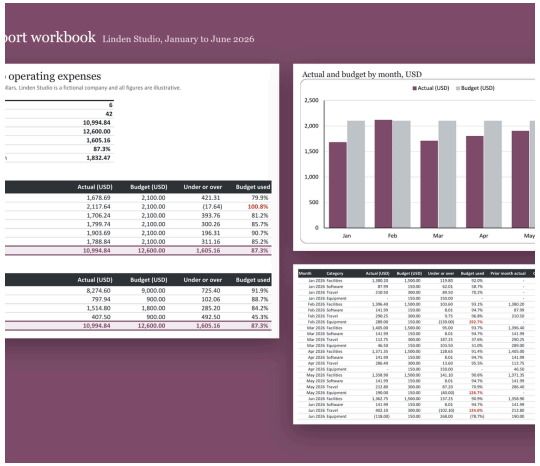

Working web app

LedgerLens revenue report

Load order and refund exports and get reconciled revenue, a twelve-month trend and every excluded row with the reason. The sample store has 308 orders and 23 refunds. Files stay in the browser.

Open LedgerLens →

Excel workbook

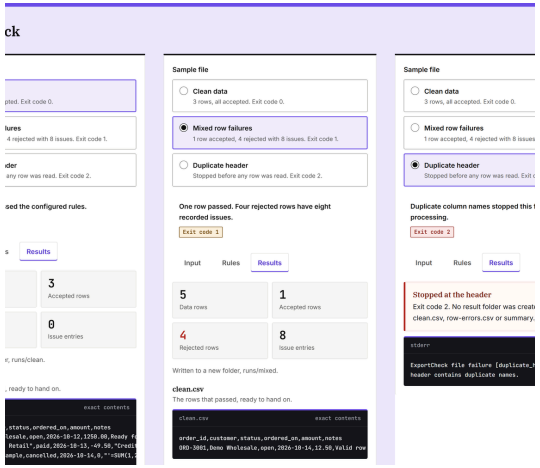

Expense report workbook

Two CSV files become an Excel report with budget variance, a prior-month comparison and reconciliation checks. Six months of sample data, and every total is a live formula.

Sample workbook →

CSV reports and spreadsheets 2 of 2

Tools that read real exports, say which rows were rejected and why, and give totals you can check by hand.

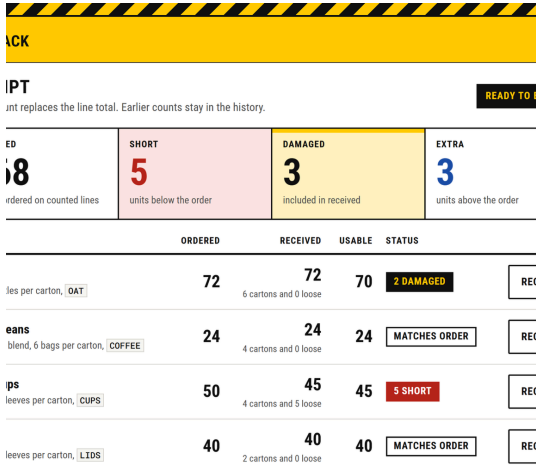

Python tool

ExportCheck CSV preflight

Checks headers, keys, dates and amounts before a CSV goes to someone else. See three recorded runs: a clean file, one with row errors kept for review and one rejected outright.

See the recorded runs →

Web app

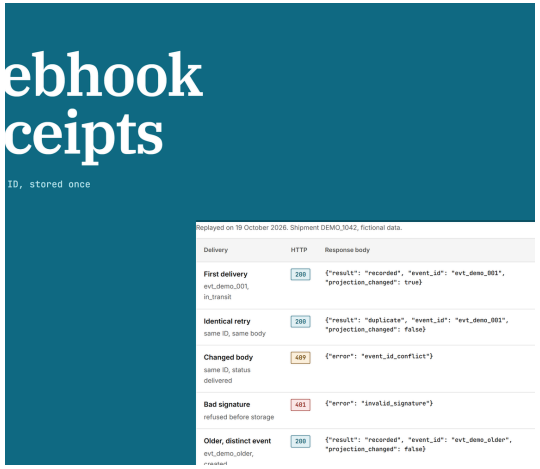

Countback delivery receiving

Count a delivery by carton or unit, flag shortages, damage and extras, and keep every correction in the history. Print the result or export it as CSV.

Open the demo →

Integrations and data moves

The parts between systems: callbacks that must not double-count, documents that need to become data, and records that have to move safely.

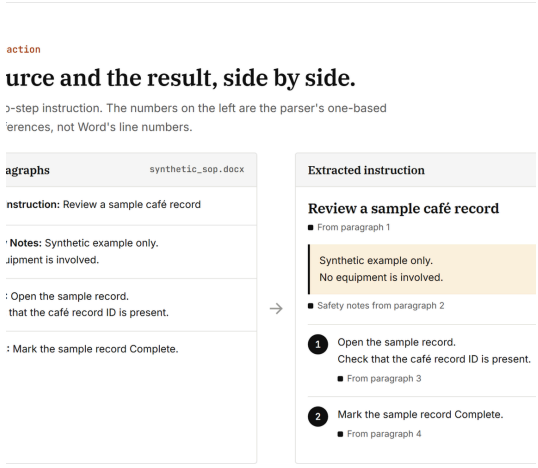

Python API

Webhook receipts without duplicates

A local service that checks signed callbacks, processes each event once and saves each receipt together with its shipment update. See five recorded outcomes, a restart and 32 passing tests.

See the study →

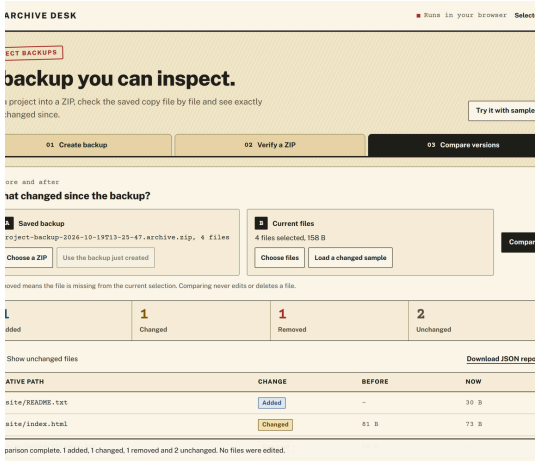

Document parsing

Work instructions from Word to JSON and CSV

A parser that turns a Word procedure written to a set template into structured steps, keeps a reference back to each source paragraph and refuses content it can't read reliably.

See the extraction →

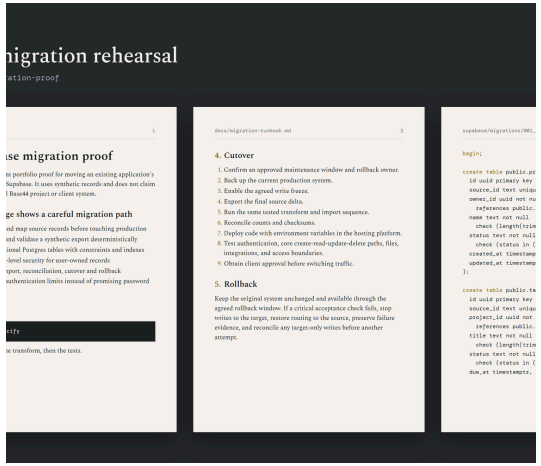

Backup app

Archive Desk project backups

Make a ZIP backup of a project in the browser, check every file against its fingerprint, compare versions and recover into a new folder. The Windows Workbench adds a backup library, imports and run history.

Try it in the browser →

Migration method

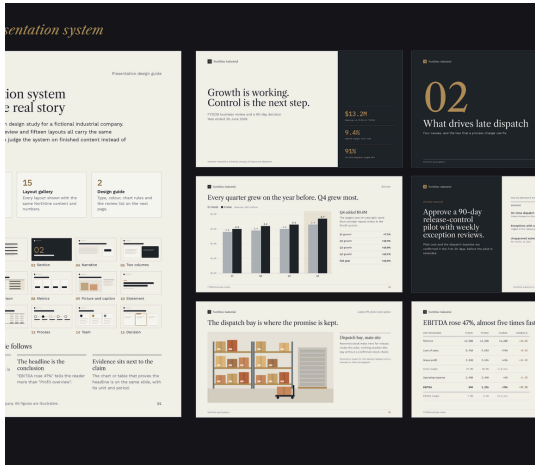

Data migration rehearsal

Repeatable transforms, a target schema with row-level security, row and total reconciliation, and a cutover and rollback runbook, rehearsed on sample data.

Source and runbook →

Business documents

Presentations, catalogues and financial packs where the numbers and terms match from page to page.

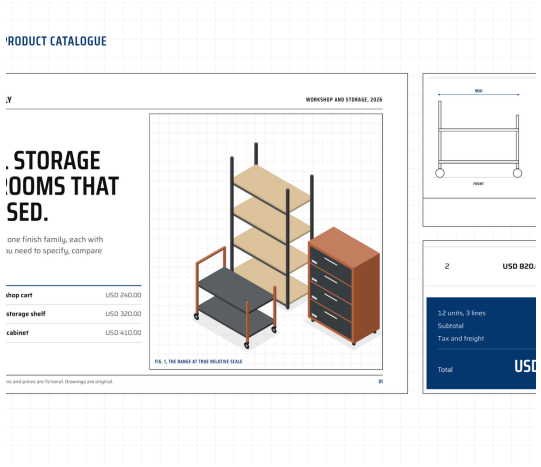

Presentation design

Northline presentation system

An eight-slide executive review with charts, a bridge and a decision slide, fifteen finished slide layouts and a two-page guide. Shown as PDF design previews.

Executive review →

Catalogue design

WerkSupply product catalogue

Four catalogue pages with original product drawings, comparable specifications and a sample quote that adds up. The editable HTML source and product list are included.

Catalogue PDF →

Financial documents

Property financing pack

A fifteen-slide portfolio deck, a four-page financing summary and a one-page term sheet for a fictional ten-asset portfolio. The figures agree across all three.

Portfolio deck →

Research and content

Speculative samples written for public briefs. None was commissioned or reviewed by the brief's author.

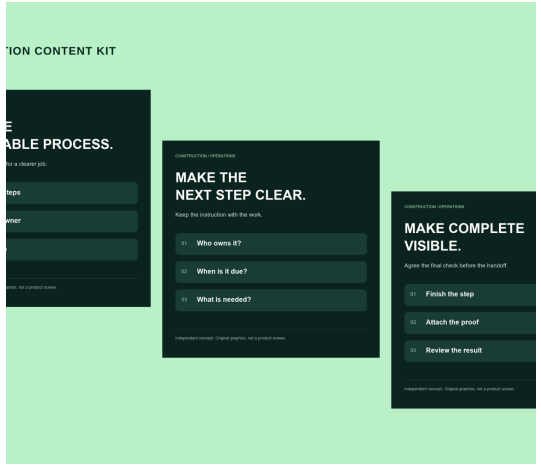

Market research, Spanish

Market signals in Cosquín

A Spanish-language scan of public sources on food retail in Cosquín, Córdoba: eight shops to verify, the prices that are visible, the gaps, and a source for every figure.

Open the report →

Social content

Construction content kit

Three posts about the small things that slow a job down, with square graphics, a 24-second vertical piece, captions and a production calendar.

Open the kit →
