Growth is working. Control is the next step.

FY2026 business review and a 90-day decision

Today

Agenda

01 **Results** p. 2
Revenue, margin and dispatch against FY2025

02 **What drives late dispatch** p. 5
Four causes, two of them controllable

03 **The release gate** p. 6
How confirmed stock protects the promise

04 **Decision and next steps** p. 8
A 90-day pilot with three measures

02

What drives late dispatch

Four causes, and the two that a process change can fix.

Growth came from repeat customers, and it exposed a control gap.

Revenue grew 10.0% to $13.2M, and every quarter beat the same quarter last year.

Margin grew faster than sales because operating expense stayed almost flat. The same growth put more orders through a dispatch process that still promises delivery before stock is confirmed.

The recommendation is a short, measured pilot rather than a new system.

EBITDA growth

+47%

EBITDA rose from $840K to $1,236K while revenue grew 10%.

Late dispatch needs a process answer.

Context

Orders are promised before stock is confirmed

On-time dispatch reached 91%, still 4 points below the 95% target. Most late orders trace back to stock that was never checked or a substitution that waited for approval.

Recommendation

Add one release gate and give exceptions an owner

Confirm stock before reservation, route every shortage to a named owner and review open exceptions weekly. Pilot it at one site for 30 days before extending.

Three priorities for the next quarter.

1

Measure the baseline

- Log every late order
- Record the cause
- Publish a weekly count

2

Test the release gate

- Run it at one site
- Review failed checks
- Adjust the check list

3

Assign ownership

- One owner per exception
- A visible deadline
- Weekly review meeting

What changes for the dispatch team.

	TODAY	WITH THE RELEASE GATE
Order promise	Given at order entry	Given after stock is confirmed
Shortages	Found at picking	Found at the gate, before reservation
Substitutions	Approved by email, sometimes late	Approved by one named owner
Visibility	Reported monthly	Reviewed every week

FY2026 at a glance.

Revenue

$13.2M

Up 10.0% from $12.0M

FY2026, USD

EBITDA margin

9.4%

Up from 7.0%

FY2026, share of revenue

Gross margin

28.0%

Up from 27.0%

FY2026, share of revenue

On-time dispatch

91%

Target 95%, up from 86%

FY2026 average of quarters

The dispatch bay is where the promise is kept.

Dispatch bay, main site

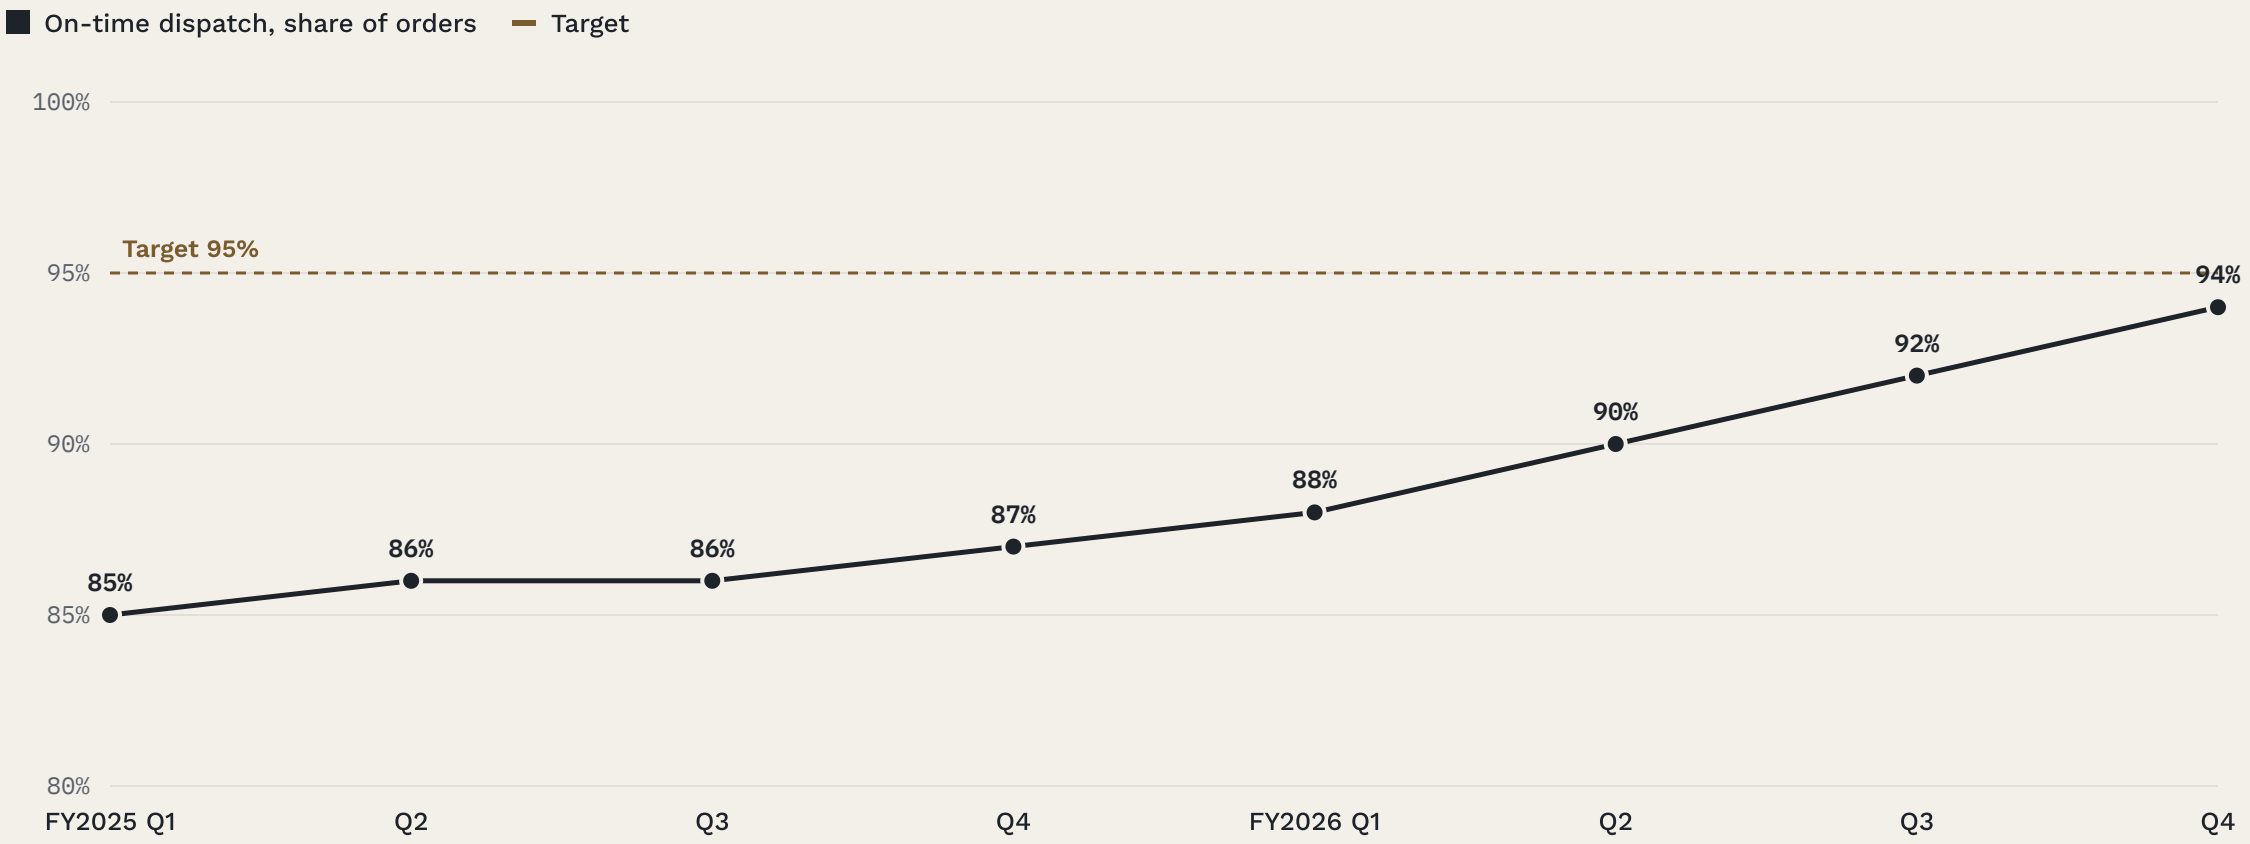

Reserved stock waits here for release. Under the pilot, nothing reaches this bay without a confirmed stock check.

Illustration drawn for this sample. Replace with a licensed or client photograph.

We do not need a new system. We need to confirm stock before we make a promise.

Key message for the FY2026 review

On-time dispatch rose from 85% to 94%.

Operating expense grew 2.5% while revenue grew 10%.

USD THOUSANDS	FY2025	FY2026	CHANGE	CHANGE %
Revenue	12,000	13,200	+1,200	10.0%
Cost of sales	8,760	9,504	+744	8.5%
Gross profit	3,240	3,696	+456	14.1%
Operating expense	2,400	2,460	+60	2.5%
EBITDA	**840**	**1,236**	**+396**	**47.1%**

Gross profit is revenue less cost of sales. EBITDA is gross profit less operating expense.

Five steps from order to dispatch.

1

Order received

Customer order is logged with a requested date.

2

Confirm stock

The release gate. Only confirmed stock moves on.

!

Resolve exception

A named owner fixes shortages and approves substitutions.

3

Reserve stock

Confirmed stock is allocated to the order.

4

Release dispatch

The order ships on the promised day.

Who owns the pilot.

OL

Operations lead

Owns the release gate

- Defines the stock check
- Resolves exceptions
- Chairs the weekly review

FL

Finance lead

Owns the numbers

- Checks the source data
- Confirms the baseline
- Reviews pilot cost

CL

Commercial lead

Owns the customer promise

- Confirms customer scope
- Approves substitutions
- Records decisions

Three options. We recommend the pilot.

Option A

Keep the current process

No cost or disruption, and no change to the causes of late dispatch.

Time to start	**None**
Expected on-time dispatch	**91%**

RECOMMENDED

Option B

90-day release-gate pilot

One site first, weekly exception reviews and a go or revise decision at day 90.

Time to start	**2 weeks**
Expected on-time dispatch	**95%**

Option C

Roll out to every site now

Faster on paper, but untested checks across all sites at once.

Time to start	**6 weeks**
Expected on-time dispatch	**Unknown**
